

Ex. 2b. Sliding Window Protocol

Client.py :

```
import socket
s = socket.socket()
s.bind(('localhost', 8000))
s.listen(5)
c, addr = s.accept()
size = int(input("Enter no. of frames to send"))
l = list(range(size))
s = int(input("Enter Window Size: "))
st = 0
i = 0
while True:
    while (i < len(l)):
        st += s
        c.send(str(l[i:st]).encode())
        ack = c.recv(1024).decode()
        if ack:
            print(ack)
            i += s
```

Server.py :

```
import socket
s = socket.socket()
s.connect(('localhost', 8000))
while True:
    print(s.recv(1024).decode())
    s.send("acknowledgment received".encode())
```

RESULT :

Client.py :

Enter number of frames to send : 12

Enter Window Size : 6

acknowledgment received

acknowledgment received

Server.py :

[0, 1, 2, 3, 4, 5]

[6, 7, 8, 9, 10, 11]
